LEGEND:

- Drugs approved for use in certain combinations
- No approved combinations when used together
- No approved combinations

APPROVED COMBINATIONS OF VETERINARY FEED DIRECTIVE (VFD) SWINE LABELS

Apramycin

- No approved combinations

Avilamycin

- No approved combinations

Bacitracin can be fed with

- Chlortetracycline

Carbadox can be fed with

- Oxytetracycline¹

Chlortetracycline can be fed with

- Bacitracin
- Tiamulin

Chlortetracycline and Sulfamethazine

- No other approved combinations

Fenbendazole can be fed with

- Lincomycin

Florfenicol

- No approved combinations

Hygromycin B

- No approved combinations

Ivermectin can be fed with

- Lincomycin

Lincomycin can be fed with

- Fenbendazole
- Ivermectin
- Pyrantel Tartrate

Neomycin Sulfate

- No approved combinations

Neomycin Sulfate and Oxytetracycline¹

- No other approved combinations

Oxytetracycline¹ can be fed with

- Carbadox

Pyrantel Tartrate can be fed with

- Lincomycin
- Tylosin

Ractopamine

- Tylosin

Sulfamethazine and Tylosin

- No other approved combinations

Tiamulin can be fed with

- Chlortetracycline

Tilmicosin

- No approved combinations

Tylosin can be fed with

- Pyrantel Tartrate
- Ractopamine

Tyvalosin

- No approved combinations

Virginiamycin

- No approved combinations

Medically Important Antibiotic Drugs (MIADs)

¹ For use in dry animal feed only. Not for use in liquid feed supplements.
